PT Drugs containing genetically-modified antibody against ganglioside GD3,  
PT its fragment, immunocompetent cell activators or/and antitumor agents in  
PT combination, applicable in treating malignant tumor like melanoma.  
XX  
PS Claim 6; Page 98; 121pp; Japanese.  
XX  
CC The invention describes drugs contain a genetically-modified antibody  
CC against ganglioside GD3 or its fragment and at least 1 of a substance  
CC capable of activating immunocompetent cells and a substance having an  
CC antitumor activity in combination. The drugs can be used to treat tumour  
CC like melanoma and can provide a treatment with enhanced therapeutic  
CC effect and little side-reactions, particularly to relieve problems of  
CC side-effects during the conventional single administration. This sequence  
CC represents a peptide associated with the anti- ganglioside GD3 antibody

 DR Antibody composition for treating ganglioside GD3 associated disease e.g.  
 XX cancer, comprises genetically modified antibody molecule, which  
 PT specifically binds to ganglioside GD3 and has N-glycoside-binding sugar  
 PT chain in its Fc domain.  
 XX Claim 8; SEQ ID NO 14; 124pp; Japanese.  
 PS The invention describes an antibody composition (I), comprising a  
 CC genetically modified antibody molecule which specifically binds to  
 CC ganglioside GD3 and has an N-glycoside-binding complex sugar chain in its  
 CC Fc domain, where the N-glycoside-binding complex sugar chain is a sugar  
 CC chain having no fucose attached to N-acetylglucosamine at the reducing  
 CC end of the sugar chain. Also described are: a transformant (II) capable  
 CC of producing (I), obtained by introducing DNA that encodes the antibody  
 CC molecule which specifically binds with ganglioside GD3, to a host cell;  
 CC producing (I), involving cultivating (I) in a culture medium, such that  
 CC C1 (sic) is produced and accumulated in the culture, extracting and  
 CC purifying C1 from the culture medium; a pharmaceutical (III) containing  
 CC C1 as an active ingredient; and a therapeutic agent (A1) for ganglioside  
 CC GD3 associated disease, comprising C1 as an active ingredient. (I) is  
 CC useful for treating GD3 associated disease, which involves administering  
 CC (I), where the GD3 associated diseases is cancer. (A1) is also useful for  
 CC treating GD3 associated disease. (II) is useful for producing (I). (I) is  
 CC useful for manufacturing a therapeutic agent for GD3 associated disease.  
 CC This sequence represents a ganglioside GD3 binding antibody associated  
 CC peptide.

 PT treating or diagnosing individuals with a disease in need of enhanced or  
 PT inhibited activity or expression of the polypeptide.  
 XX Claim 1; Page 3; 38pp; English.  
 PS The present sequence is the Staphylococcus aureus phosphopantethienyl  
 CC transferase family protein Acps. The DNA encoding this sequence was  
 CC isolated from a Staphylococcus aureus DNA library. The Acps protein and  
 CC its agonists, antagonists or nucleic acids may be used to treat  
 CC individuals that are in need of enhanced or inhibited activity or  
 CC expression of the protein, or an immunological response to it. They may  
 CC also be used to detect and treat microbial diseases, such as Helicobacter  
 CC pylori infections that cause stomach cancer, ulcers and gastritis

PS
XX
XX The present invention describes a crystallised recombinant polypeptide
CC (I) comprising amino acid sequence of polypeptides from Staphylococcus
CC aureus, Streptococcus pneumoniae, Helicobacter pylori and Pseudomonas
CC aeruginosa and which are involved in membrane biosynthesis, or amino acid
CC sequences having at least 90 % identity with the polypeptide sequence,
CC where the polypeptide is in crystal form. (I) has antibacterial activity
CC and can be used in vaccines. (I) is useful for designing a modulator for
CC the prevention or treatment of S. aureus, H. pylori, S. pneumoniae, and
CC P. aeruginosa-related disease or disorder. (I) is also useful for
CC identifying small molecules that bind to a recombinant polypeptide. The
CC structural and functional information of (I) aid in the discovery and
CC design of therapeutic and diagnostic molecules. The crystal structure is
CC useful to make a structural or computer model of the polypeptide, complex
CC or its portion. (I) can be used for inducing an immunological response in
CC an individual and as an antigen for vaccination of a host to produce
CC specific antibodies which protect against invasion of bacteria, for
CC example by blocking adherence of bacteria to damaged tissue. ACF06185 to

XX New antisense nucleic acids, useful for identifying proteins or screening
XX for homologous nucleic acids required for cellular proliferation to
XX isolate candidate molecules for rational drug discovery programs.
XX
XX Claim 25; SEQ ID NO 44196; 1766pp; English.
XX
XX The invention relates to an isolated nucleic acid comprising any one of
XX the 6213 antisense sequences given in the specification where expression
XX of the nucleic acid inhibits proliferation of a cell. Also included are:
XX (1) a vector comprising a promoter operably linked to the nucleic acid
XX encoding a polypeptide whose expression is inhibited by the antisense
XX nucleic acid; (2) a host cell containing the vector; (3) an isolated
XX polypeptide or its fragment whose expression is inhibited by the
XX antisense nucleic acid; (4) an antibody capable of specifically binding
XX the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
XX proliferation or the activity of a gene in an operon required for
XX proliferation; (7) identifying a compound that influences the activity of
XX the gene product or that has an activity against a biological pathway
XX required for proliferation, or that inhibits cellular proliferation; (8)
XX identifying a gene required for cellular proliferation or the biological
XX pathway in which a proliferation-required gene or its gene product lies
XX or a gene on which the test compound that inhibits proliferation of an
XX organism acts; (9) manufacturing an antibiotic; (10) profiling a
XX compound's activity; (11) a culture comprising strains in which the gene
XX product is overexpressed or underexpressed; (12) determining the extent
XX to which each of the strains is present in a culture or collection of
XX strains; or (13) identifying the target of a compound that inhibits the
XX proliferation of an organism. The antisense nucleic acids are useful for
XX identifying proteins or screening for homologous nucleic acids required
XX for cellular proliferation to isolate candidate molecules for rational
XX drug discovery programs, or for screening homologous nucleic acids
XX required for proliferation in cells other than S. aureus, S. typhimurium,
XX K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of

 PT New Staphylococcus aureus protein, useful as a vaccine for treating or  
 PT preventing Staphylococcal infection, specifically an infection caused by  
 PT *S. aureus*, e.g. sepsis.  
 XX  
 PS Claim 1; SEQ ID NO 2078; 49pp; English.  
 CC The invention relates to novel genes and encoded proteins from  
 CC Staphylococcus aureus. A composition comprising the *S. aureus* protein, a  
 CC nucleic acid encoding the protein, or an antibody to the protein, is  
 CC useful as a pharmaceutical, particularly as a vaccine for treating or  
 CC preventing infection due to Staphylococcus bacteria, specifically an  
 CC infection caused by *S. aureus*. The composition is particularly useful for  
 CC treating or preventing sepsis in a patient. The composition can also be  
 CC used for diagnostics. The protein is also used in an assay for enzymatic  
 CC studies and as a target for antibiotics. This sequence represents one of  
 CC the novel *S. aureus* proteins of the invention

XX Predicting operons of prokaryotes, by segregating consecutive genes of  
PT organism, into bins based on their orientation, performing composite  
PT operon prediction analysis, associating genes between operon boundaries  
PT as putative operons.  
XX  
XX Example 7; SEQ ID NO 722; 116pp; English.  
XX  
XX The present invention relates to a method (M1) for predicting operons of  
CC target prokaryotes. The method comprises identifying consecutive genes of  
CC an organism's genome, determining the orientation of a gene in the genome  
CC relative to its flanking genes, segregating the genes into bins based on  
CC their orientation, performing composite operon prediction analysis,  
CC determining operon boundaries by identifying gene pairs with confidence  
CC scores below specific threshold and associating genes between boundaries  
CC as putative operons. Also claimed is a computer-based system (I) for  
CC carrying out (M1). (M1) is useful for identifying a gene that is required  
CC for proliferation of a microorganism and in cell-based assays. ADW94067-  
CC ADW94260 are proliferation-required operons from Staphylococcus aureus,  
CC predicted using the method of the invention. ADW94261-ADW94610 are  
CC proliferation-required genes, and ADW94611-ADW94884 are the encoded  
CC proteins, from the predicted operons of the invention. Note: The sequence  
CC data for this patent did not form part of the printed specification, but  
CC was obtained in electronic format directly from USPTO at  
CC seqdata.uspto.gov/sequence.html?DocID=20050026189.

XX Antibody composition for treating ganglioside GD3 associated disease e.g.  
PT cancer, comprises genetically modified antibody molecule, which  
PT specifically binds to ganglioside GD3 and has N-glycoside-binding sugar  
PT chain in its Fc domain.  
XX  
XX Claim 13; SEQ ID NO 20; 124pp; Japanese.  
XX  
XX The invention describes an antibody composition (I), comprising a  
CC genetically modified antibody molecule which specifically binds to  
CC ganglioside GD3 and has an N-glycoside-binding complex sugar chain in its  
CC Fc domain, where the N-glycoside-binding complex sugar chain is a sugar  
CC chain having no fucose attached to N-acetylglucosamine at the reducing  
CC end of the sugar chain. Also described are: a transformant (II) capable  
CC of producing (I), obtained by introducing DNA that encodes the antibody  
CC molecule which specifically binds with ganglioside GD3, to a host cell;  
CC producing (I), involving cultivating (I) in a culture medium, such that  
CC C1 (sic) is produced and accumulated in the culture, extracting and  
CC purifying C1 from the culture medium; a pharmaceutical (III) containing  
CC C1 as an active ingredient; and a therapeutic agent (A1) for ganglioside  
CC GD3 associated disease, comprising C1 as an active ingredient. (I) is  
CC useful for treating GD3 associated disease, which involves administering  
CC (I), where the GD3 associated disease is cancer. (A1) is also useful for  
CC treating GD3 associated disease. (II) is useful for producing (I). (I) is  
CC useful for manufacturing a therapeutic agent for GD3 associated disease.  
CC This sequence represents a ganglioside GD3 binding antibody associated  
CC protein.

 PT cytotoxic effect on cancers such as melanoma, neuroblastoma and glioma.  
 XX  
 PS Example 2; Page 116-117; 191pp; English.

XX Example 2 describes the construction of the vector pCh1641HA1 for  
 CC chimeric human antibody H chain expression. mRNA from mouse anti-GD3  
 CC monoclonal Ab KM641-producing cells was isolated and KM641 H and L chain  
 CC cDNAs isolated. The base sequences of the Ig variable regions in KM641 H  
 CC chain cDNA (pKM641HA3) and KM641 L chain cDNA (pKM641HA2) are given in  
 CC AAQ45438-39. A KM641-derived chimeric human Ab H chain expression vector  
 CC was constructed by joining the H chain variable region gene from  
 CC pKM641HA3 to a vector for chimeric human Ab H chain expression using the  
 CC synthetic DNAs given in AAQ63439 and AAQ63440

 PT Chimeric human antibody expression vectors.  
 XX  
 PS Example 1; Col 99-101; 188pp; English.  
 XX  
 CC This immunoglobulin region was isolated from pKM641HA3. This sequence has  
 CC no methionine initiation codon and the leader sequence was partly  
 CC lacking. The chimeric human antibodies are useful in the treatment of  
 CC cancer, especially that which is of neural ectodermal origin. In contrast  
 CC to prior art constructs based on mouse monoclonal antibodies, the  
 CC chimeric human antibodies do not cause anti-mouse immunoglobulin  
 CC production. The chimeric human antibodies have a prolonged half-life and  
 CC a reduced frequency of adverse effects when compared to mouse monoclonal  
 CC antibodies

 PT New isolated polynucleotide and encoded polypeptides, useful in  
 PT diagnostics, forensics, gene mapping, identification of mutations  
 PT responsible for genetic disorders or other traits and to assess  
 PT biodiversity.  
 XX  
 PS Claim 20; SEQ ID NO 59338; 103pp; English.  
 XX  
 CC The invention relates to isolated polynucleotide (I) and polypeptide (II)  
 CC sequences. (II) is useful as hybridisation probes, polymerase chain  
 CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,  
 CC and in recombinant production of (II). The polynucleotides are also used  
 CC in diagnostics as expressed sequence tags for identifying expressed  
 CC genes. (I) is useful in gene therapy techniques to restore normal

CC activity of (II) or to treat disease states involving (II). (II) is  
 CC useful for generating antibodies against it, detecting or quantitating a  
 CC polypeptide in tissue, as molecular weight markers and as a food  
 CC supplement. (II) and its binding partners are useful in medical imaging  
 CC of sites expressing (II). (I) and (II) are useful for treating disorders  
 CC involving aberrant protein expression or biological activity. The  
 CC polypeptide and polynucleotide sequences have applications in  
 CC diagnostics, forensics, gene mapping, identification of mutations  
 CC and responsible for genetic disorders or other traits to assess biodiversity  
 CC and to produce other types of data and products dependent on DNA and  
 CC amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic  
 CC amino acid sequences of the invention. Note: The sequence data for this  
 CC patent did not appear in the printed specification, but was obtained in  
 CC electronic format directly from WIPO at  
 CC ftp.wipo.int/pub/published\_pct\_sequences

 XX New nucleotide sequences isolated from Pyrococcus abyssi encode proteins  
 PT useful in industry.  
 PS  
 PS Claim 7; Page 1634; 1657pp; French.  
 XX  
 CC The present invention relates to the genomic sequence of Pyrococcus  
 CC abyssi (see AAF8431 and AAH41223-7) and P. abyssi proteins. P. abyssi is  
 CC a hyperthermophilic archaeon, which is isolated from deep-sea  
 CC hydrothermal vents. The present sequence is one such P. abyssi protein.  
 CC The proteins of the present invention have various potential industrial  
 CC uses, since the proteins are stable at very high temperatures, some up to  
 CC 110 degrees centigrade. Note: This patent is in the same patent family as  
 CC WO200005082, which contains additional sequences as shown in AAB99132-  
 CC AAB99143, AAH75903-AAH75920 and AAG66436

 PT Method for disrupting targeted gene in genome of organism particularly  
 PT thermotable bacterium and with genome chips for analysis, applicable in  
 PT studying gene structure and functions.  
 XX  
 PS Claim 9; SEQ ID NO 751; 598pp; Japanese.  
 XX  
 CC This invention relates to a novel method for targeting disruption of an  
 CC arbitrary gene in a genome of an organism which comprises providing the  
 CC whole sequential data of the genome of such organism, selecting at least  
 CC 1 arbitrary region in the sequence, providing a vector that contains a  
 CC sequence homologous with the selected region and a marker gene,  
 CC transformation, and homologous recombination. The genome is preferably  
 CC the genome of a hyperthermostable archaeobacterium, particularly  
 CC Thermococcus kodakaraensis KOD1. The method is for targeting the  
 CC disruption of a gene in the genome of an organism, which is applicable in  
 CC studying gene structure and functions as well as enzyme activities of  
 CC encoded proteins and useful in medicine, forensic science, food or drug  
 CC inspection, molecular biology and immunology. With this method, the  
 CC disruption of a gene at an arbitrary position in a genome can be achieved  
 CC efficiently and reliably. The present sequence is that of a protein  
 CC encoded by the genome of Thermococcus kodakaraensis which was derived  
 CC using the method of the invention. Note: The sequence data for this  
 CC patent did not form part of the printed specification, but was obtained  
 CC in electronic format directly from WIPO at  
 CC ftp.wipo.int/pub/published\_pct\_sequences

 PT New recombinant DNA construct comprising a promoter positioned to provide  
 PT for expression of a polynucleotide encoding a polypeptide from a  
 PT microbial source, useful for producing plants with improved properties.  
 XX  
 PS Claim 1; SEQ ID NO 10250; 122pp; English.  
 XX  
 CC The invention relates to a recombinant DNA construct comprising a  
 CC promoter functional in a plant cell, where the promoter is positioned to  
 CC provide for expression of a polynucleotide encoding a polypeptide from a  
 CC microbial source. The invention also relates to a transformed plant  
 CC comprising the recombinant DNA construct and a method of producing a  
 CC transformed plant having an improved property. The plant is a crop plant  
 CC such as maize or soybean. The method of producing a transformed plant  
 CC having an improved property comprises transforming a plant with the  
 CC recombinant DNA construct and growing the transformed plant, where the  
 CC polynucleotide or polypeptide is useful for improving plant properties.  
 CC The recombinant DNA construct is useful for producing plants with  
 CC improved plant properties, e.g. improved cold, heat or drought tolerance,  
 CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,  
 CC increased resistance to plant disease, better growth rate by modification  
 CC of the cell cycle pathway with plant growth regulators, increased rate of  
 CC homologous recombination, modified seed oil or protein yield and/or  
 CC content, improved yield by modification of carbohydrate, nitrogen or  
 CC phosphorus use and/or uptake, by modification of photosynthesis or by  
 CC providing improved plant growth and development under at least one stress  
 CC condition, improved lignin production or improved galactomannan  
 CC production. This sequence represents a bacterial polypeptide used in the  
 CC scope of the invention. Note: The sequence data for this patent did not  
 CC form part of the printed specification but was obtained in electronic  
 CC format from USPTO at seqdata.uspto.gov/sequence.html.

PT  Nucleic acids encoding polypeptides with cytokine-like activities, useful
PT  in diagnosis and gene therapy.
XX
PS  Claim 20; Page 4124-4126; 6221pp; English.
XX
CC  The invention relates to polynucleotides (AAK51456-AAK53435) and the
CC  encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to
CC  cytokine, cell proliferation or cell differentiation or which may induce
CC  production of other cytokines in other cell populations. The
CC  polynucleotides and polypeptides are useful in gene therapy, vaccines or
CC  peptide therapy. The polypeptides have various cytokine-like activities,
CC  e.g. stem cell growth factor activity, haematopoiesis regulating
CC  activity, tissue growth factor activity, immunomodulatory activity and
CC  activin/inhibin activity and may be useful in the diagnosis and/or
CC  treatment of cancer, leukaemia, nervous system disorders, arthritis and
CC  inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111
CC  (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the
CC  sequence listing were missing at the time of publication

PT  Biomarkers useful for predicting or determining the response of a mammal
PT  to a cancer treatment comprising administration of a modulator of cyclin-
PT  dependent kinase activity.
XX
PS  Claim 5; SEQ ID NO 1134; 141pp; English.
XX
CC  This invention describes a novel method of predicting or determining
CC  whether a mammal will respond or is responding to an anti-cancer agent
CC  that modulates cyclin-dependent kinase (cdk) activity. The method
CC  comprises measuring the level of one or more biomarkers selected from
CC  2774 biomarkers given in the specification (nucleotide sequence SEQ ID
CC  NO:1246 (Genbank EST W28729) is especially preferred). The method of the
CC  invention is utilized in a kit for determining or predicting whether
CC  patient would be susceptible or resistant to treatment by an agent
CC  modulating cdk activity. The invention also describes a method for
CC  utilizing individualized genetic profiles for treating diseases and
CC  disorders based on patient's response and molecular level, specialized
CC  microarrays comprising the biomarkers described, antibodies directed
CC  against the biomarkers and a cell culture model to identify biomarkers.
CC  The cdk modulator is preferably N-5-[(5-(1,1-Dimethylethyl)-2-
CC  oxazolyl)methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-
CC  tartaric acid salt. Note: The sequence data for this patent did not form
CC  part of the printed specification, but was obtained in electronic format
CC  directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This
CC  sequence represents a biomarker used in the method of the invention.

 PT Polymorphic nucleic acids encoding e.g. amylases, cyclins, polymerases,  
 PT oncogenes and histones, useful for diagnosing and treating, e.g. cancer,  
 PT autoimmune diseases and infections.  
 XX  
 PS Disclosure; Page 3779; 4143pp; English.  
 XX  
 CC The present invention relates to oligonucleotides (see AAL26793-AAL34659)  
 CC encoding polymorphic variants of proteins related to amylases, amyloid  
 CC proteins, angiotensin, apoptosis related proteins, cadherin, cyclin,  
 CC polymerase, oncogenes, histones, kinases, colony stimulating factors,  
 CC complement related proteins, cytochromes, kinesins, cytokines,  
 CC interferons, interleukins, G-protein coupled receptors and thioesterases.  
 CC The present sequence is a peptide encoded by one such oligonucleotide.  
 CC The oligonucleotides and the peptides encoded by them may be used in the  
 CC prevention, diagnosis and treatment of diseases associated with  
 CC inappropriate expression of the proteins listed above. Disorders that may  
 CC be prevented, diagnosed and/or treated include multifactorial diseases  
 CC with a genetic component, such as autoimmune diseases (e.g. rheumatoid  
 CC arthritis, multiple sclerosis, diabetes, systemic lupus erythematosus  
 CC and Grave's disease), inflammation, cancer (e.g. cancers of the bladder,  
 CC brain, breast, colon and kidney, leukaemia), diseases of the nervous  
 CC system and an infection of pathogenic organisms

 PT Isolated nucleic acid molecule encoding a human secreted protein is used  
 PT in preventing, treating or ameliorating a medical condition.  
 XX  
 PS Claim 11; Page 387; 419pp; English.  
 XX  
 CC The polynucleotide sequences given in AAC59738 to AAC59787 encode the  
 CC human secreted proteins given in AAB34577 to AAB34626. AAB34627 to  
 CC AAB34686 represent human secreted polypeptide sequences and proteins  
 CC homologous to them, which are given in the exemplification of the present  
 CC invention. Human secreted proteins have activities based on the tissues  
 CC and cells the genes are expressed in. Example of activities include:  
 CC antiarthritic; immunosuppressive; antirheumatic; antiproliferative;  
 CC neurostatic; cardiac; vasotropic; cerebroprotective; neurotropic;  
 CC cerebroprotective; antibacterial; virucide; fungicide; and  
 CC ophthalmological. The polynucleotides and proteins can be used to  
 CC prevent, treat or ameliorate a medical condition in e.g. humans, mice,  
 CC rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used  
 CC in diagnosing a pathological condition or susceptibility to a  
 CC pathological condition. Disorders which are diagnosed or treated include  
 CC autoimmune diseases, hyperproliferative disorders e.g. neoplasms and  
 CC cancers of the breast or liver, cardiovascular disorders, cerebrovascular  
 CC disorders, angiogenesis, nervous system disorders, infections caused by  
 CC bacteria, viruses and fungi and ocular disorders. The proteins can also  
 CC be used to aid wound healing and epithelial cell proliferation, to  
 CC prevent skin aging due to sunburn, to maintain organs before  
 CC transplantation, for supporting cell culture of primary tissues, to  
 CC regenerate tissues and in chemotaxis. The proteins can also be used as a  
 CC food additive or preservative to increase or decrease storage  
 CC capabilities. AAC59729 to AAC59737 and AAB34576 represent sequences used  
 CC in the exemplification of the present invention

XX The present invention describes an isolated polynucleotide (I) of  
 CC *Alloiooccus otitidis* genomic DNA, which encodes an antigenic protein.  
 CC *Alloiooccus otitidis* is a Gram-positive bacterium. Also described: (1)  
 CC an isolated polypeptide that is encoded by the polynucleotide (I); (2) an  
 CC expression vector comprising the novel isolated polynucleotide (I); its  
 CC complement, degenerate variant or fragment; (3) a genetically engineered  
 CC host cell, transfected, transformed or infected with the vector of (2);  
 CC (4) an antibody specific for the polypeptide of (1); (5) an immunogenic  
 CC composition comprising the polypeptide, its complement, biological  
 CC equivalent or fragment, or the polynucleotide that is comprised in the  
 CC expression vector; (6) a pharmaceutical composition comprising the  
 CC polypeptide of (1) and a carrier; (7) a protein chip comprising an array  
 CC of the polypeptides of (1), their biological equivalent or fragment; (8)  
 CC immunising against *Alloiooccus otitidis* by administering to a host the  
 CC immunogenic composition; (9) detecting and/or identifying *Alloiooccus*  
 CC *otitidis* in the biological sample; (10) a kit comprising a container  
 CC containing the novel polynucleotide, its degenerate variant or fragment,  
 CC or the antibody of (4); and (11) producing a polypeptide by culturing the  
 CC genetically engineered host cell under conditions suitable to produce the  
 CC polypeptide from the culture. (I) can be used in gene therapy. The  
 CC polynucleotides, polypeptides, antibodies and compositions of the present  
 CC invention can be used for treating and diagnosing diseases, drug  
 CC screening assays and monitoring of effects during drug clinical trials.  
 CC The polynucleotides are useful for expressing and detecting *Alloiooccus*  
 CC *otitidis*. The present sequence represents an *Alloiooccus otitidis*  
 CC antigen protein from the present invention.

XX Nucleic acids encoding polypeptides from *Staphylococcus epidermidis*,  
 PT useful for vaccinating against infections, e.g. endocarditis.

XX Claim 18; Page 271; 2189pp; English.

XX AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides  
 CC (II), given in AAG81454 to AAG83120, from *Staphylococcus epidermidis*. (I)  
 CC and (II) can have antibacterial activity and therefore can be used in  
 CC vaccination. The nucleic acids (I) may be used to produce the S.  
 CC epidermidis polypeptides (II) via the production of vectors containing  
 CC them which are used to produce hosts cells which express the  
 CC polypeptides. The polypeptides (II) (and/or nucleic acids) may then be  
 CC used to vaccinate subjects and to raise antibodies against the bacteria.  
 CC The polypeptides may also be used to assay for other inhibitors of their  
 CC activity and therefore identify compounds that may be used for the  
 CC treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to  
 CC AAH55090 represent specifically claimed S. epidermidis genomic DNA  
 CC polynucleotide sequences from the present invention. AAH55091 to AAH55098  
 CC represent oligonucleotide sequences and primers which are used in the  
 CC exemplification of the present invention. N.B. The present invention  
 CC specifically claims all the polynucleotide sequences given in the  
 CC sequence listing of the present specification, however the sequence  
 CC listing only goes up to SEQ ID NO:4454 so even though sequences are given  
 CC in the disclosure for SEQ ID NO:4465 to 4472, no sequences are present  
 CC for SEQ ID NO:4455 to 4464

XX New antisense nucleic acids, useful for identifying proteins or screening  
 PT for homologous nucleic acids required for cellular proliferation to  
 PT isolate candidate molecules for rational drug discovery programs.

XX Claim 25; SEQ ID NO 77481; 1766pp; English.

CC The invention relates to an isolated nucleic acid comprising any one of  
 CC the 6213 antisense sequences given in the specification where expression  
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:  
 CC (1) a vector comprising a promoter operably linked to the nucleic acid  
 CC encoding a polypeptide whose expression is inhibited by the antisense  
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated  
 CC polypeptide or its fragment whose expression is inhibited by the  
 CC antisense nucleic acid; (4) an antibody capable of specifically binding  
 CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular  
 CC proliferation or the activity of a gene in an operon required for  
 CC proliferation; (7) identifying a compound that influences the activity of  
 CC the gene product or that has an activity against a biological pathway  
 CC required for proliferation, or that inhibits cellular proliferation; (8)  
 CC identifying a gene required for cellular proliferation or the biological  
 CC pathway in which a proliferation-required gene or its gene product lies  
 CC or a gene on which the test compound that inhibits proliferation of an  
 CC organism acts; (9) manufacturing an antibiotic; (10) profiling a  
 CC product's activity; (11) a culture comprising strains in which the gene  
 CC product is overexpressed or underexpressed; (12) determining the extent  
 CC to which each of the strains is present in a culture or collection of  
 CC strains; or (13) identifying the target of a compound that inhibits the  
 CC proliferation of an organism. The antisense nucleic acids are useful for  
 CC identifying proteins or screening for homologous nucleic acids required  
 CC for cellular proliferation to isolate candidate molecules for rational  
 CC drug discovery programs, or for screening homologous nucleic acids  
 CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,  
 CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of  
 CC the target prokaryotic essential genes. Note: The sequence data for this  
 CC patent did not form part of the printed specification, but was obtained  
 CC in electronic format directly from WIPO at  
 CC ftp.wipo.int/pub/published\_pct\_sequences

PT New Alloiooccus otitis polynucleotides and polypeptides, useful for  
 PT treating and diagnosing diseases, drug screening assays and monitoring of  
 PT effects during drug clinical trials.

XX Claim 33; SEQ ID NO 1614; 1019pp; English.

CC The present invention describes an isolated polynucleotide (1) of  
 CC Alloiooccus otitis genomic DNA, which encodes an antigenic protein.  
 CC Alloiooccus otitis is a Gram-positive bacterium. Also described: (1)  
 CC an isolated polypeptide that is encoded by the polynucleotide (1); (2) an  
 CC expression vector comprising the novel isolated polynucleotide (1); its  
 CC complement, degenerate variant or fragment; (3) a genetically engineered  
 CC host cell, transfected, transformed or infected with the vector of (2);  
 CC (4) an antibody specific for the polypeptide of (1); (5) an immunogenic  
 CC composition comprising the polypeptide, its complement, biological  
 CC equivalent or fragment, or the polynucleotide that is comprised in the  
 CC expression vector; (6) a pharmaceutical composition comprising the  
 CC polypeptide of (1) and a carrier; (7) a protein chip comprising an array  
 CC of the polypeptides of (1), their biological equivalent or fragment; (8)  
 CC immunising against Alloiooccus otitis by administering to a host the  
 CC immunogenic composition; (9) detecting and/or identifying Alloiooccus  
 CC otitis in the biological sample; (10) a kit comprising a container  
 CC containing the novel polynucleotide, its degenerate variant or fragment,  
 CC or the antibody of (4); and (11) producing a polypeptide by culturing the  
 CC genetically engineered host cell under conditions suitable to produce the  
 CC polypeptide from the culture. (1) can be used in gene therapy. The  
 CC polynucleotides, polypeptides, antibodies and compositions of the present  
 CC invention can be used for treating and diagnosing diseases, drug  
 CC screening assays and monitoring of effects during drug clinical trials.  
 CC The polynucleotides are useful for expressing and detecting Alloiooccus  
 CC otitis. The present sequence represents an Alloiooccus otitis  
 CC antigen protein from the present invention.

New isolated polypeptide useful for diagnosing and treating  
immunosuppressive conditions such as autoimmune disease and Parkinson's  
disease.

Claim 11; SEQ ID NO 938; 345pp; English.

The invention relates to an isolated polypeptide. The polypeptide is  
useful for diagnosing a pathological condition or a susceptibility to a  
pathological condition in a subject, by determining the presence or  
amount of expression of the polypeptide in a biological sample and  
diagnosing a pathological condition or a susceptibility to a pathological  
condition based on the presence or amount of expression of the  
polypeptide. The polypeptide is also useful for identifying a binding  
partner to the polypeptide, which involves contacting the polypeptide  
with a binding partner and determining whether the binding partner  
effects an activity of the polypeptide. The polypeptide or the nucleic  
acid encoding the polypeptide is useful for preventing, treating, or  
ameliorating a medical condition, which involves administering the  
polypeptide or the nucleic acid to a mammalian subject. The nucleic acid  
is useful for diagnosing a pathological condition or a susceptibility to  
a pathological condition in a subject, which involves determining the  
presence or absence of a mutation in the nucleic acid, and diagnosing a  
pathological condition or susceptibility to a pathological condition  
based on the presence or absence of the mutation. The polypeptide, the  
nucleic acid and an antibody to the polypeptide are useful for treating  
autoimmune disease, Parkinson's disease, silicosis, gastrointestinal  
disease, atherosclerosis, haemophilia, thrombocytopenia. The polypeptide,  
the nucleic acid and the antibody are useful as immunosuppressive agents,  
as adjuvants to enhance immune responses, and as agents to induce higher  
affinity antibodies and increase serum immunoglobulin concentrations. The  
present sequence represents the amino acid sequence of a novel human  
protein. Note: The sequence data for this patent did not form part of the

CC printed specification but was obtained in electronic format direct from  
CC USPTO at seqdata.uspto.gov/sequence.html?DocID=20020169711.

CC The invention relates to isolated polynucleotide (I) and polypeptide (II)  
CC sequences. (I) is useful as hybridisation probes, polymerase chain  
CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,  
CC and in recombinant production of (II). The polynucleotides are also used  
CC in diagnostics as expressed sequence tags for identifying expressed  
CC genes. (I) is useful in gene therapy techniques to restore normal  
CC activity of (II) or to treat disease states involving (II). (II) is  
CC useful for generating antibodies against it, detecting or quantitating a  
CC polypeptide in tissue, as molecular weight markers and as a food  
CC supplement. (II) and its binding partners are useful in medical imaging  
CC of sites expressing (II). (I) and (II) are useful for treating disorders  
CC involving aberrant protein expression or biological activity. The  
CC polypeptide and polynucleotide sequences have applications in  
CC diagnostics, forensics, gene mapping, identification of mutations  
CC responsible for genetic disorders or other traits to assess biodiversity  
CC and to produce other types of data and products dependent on DNA and  
CC amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic  
CC amino acid sequences of the invention. Note: The sequence data for this  
CC patent did not appear in the printed specification, but was obtained in  
CC electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences

XX  
CC The invention relates to modulating angiogenesis at a site by supplying a  
CC composition comprising a variant Ryk protein (I) (a member of the  
CC receptor tyrosine kinase family), or modulating formation of cells into  
CC capillary-like structures by contacting the cells with a composition  
CC comprising (I). The method is useful modulating angiogenesis at a site  
CC (preferably, within a human) or modulating the formation of cells  
CC (endothelial cells of human origin) into capillary-like structure. The  
CC (I) is useful for preventing, treating or ameliorating a medical  
CC condition e.g., cancer, metastasis, diabetic retinopathy, macular  
CC degeneration, cardiovascular disease, wound, pregnancy, or a clinical  
CC regulation of placental vascularization in an individual. The variant  
CC protein is supplied to the individual as a source of polynucleotide  
CC encoding the protein and expressing the protein in vivo. (I) is used as  
CC an immunogen to produce an antibody against it. The antibodies are useful  
CC for modulating angiogenesis at a site. Polynucleotides encoding (I) is  
CC useful in gene therapy technique for treating above mentioned medical  
CC conditions. The present sequence represents the amino acid sequence of  
CC the extracellular domain of Ryk protein consisting the Wnt inhibitory  
CC factor (WIF) domain

CC -!- FUNCTION: Plays an important role in the initiation and regulation
CC of chromosomal replication. Binds to the origin of replication; it
CC binds specifically double-stranded DNA at a 9 bp consensus (dnaA
CC box): 5'-TTATC[CA]A[CA]A-3'. DnaA binds to ATP and to acidic
CC phospholipids (By similarity).
CC -!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
CC -!- SIMILARITY: Belongs to the dnaA family.

CC -! FUNCTION: Component of the COPII coat, that covers ER-derived
CC vesicles involved in transport from the endoplasmic reticulum to
CC the Golgi apparatus. COPII acts in the cytoplasm to promote the
CC transport of secretory, plasma membrane, and vacuolar proteins
CC from the endoplasmic reticulum to the Golgi complex.

-! SUBUNIT: COPII is composed of at least five proteins: the Sec23/24
complex, the Sec13/31 complex and Sar1. Sec24B is capable of
forming heterodimers with Sec24A.
-! INTERACTION:
CC 15436:SEC23A; NbExp=1; IntAct=EBI-81101, EBI-81088;
-! SUBCELLULAR LOCATION: Cytoplasmic and perinuclear.
CC -! TISSUE SPECIFICITY: Expressed in fibroblasts, hepatocytes, and
lymphocytes.
CC -! SIMILARITY: Belongs to the SEC23/SEC24 family. SEC24 subfamily.

\*Pred. No. is the number of results predicted by chance to have a  
"score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

XX Drugs containing genetically-modified antibody against ganglioside GD3,  
PT its fragment, immunocompetent cell activators or/and antitumor agents in  
PT combination, applicable in treating malignant tumor like melanoma.

XX  
PS Claim 6; Page 98; 121pp; Japanese.

XX The invention describes drugs contain a genetically-modified antibody  
CC against ganglioside GD3 or its fragment and at least 1 of a substance  
CC capable of activating immunocompetent cells and a substance having an  
CC antitumor activity in combination. The drugs can be used to treat tumour  
CC like melanoma and can provide a treatment with enhanced therapeutic  
CC effect and little side-reactions, particularly to relieve problems of  
CC side-effects during the conventional single administration. This sequence  
CC represents a peptide associated with the anti- ganglioside GD3 antibody

 XX Antibody composition for treating ganglioside GD3 associated disease e.g.  
 PT cancer, comprises genetically modified antibody molecule, which  
 PT specifically binds to ganglioside GD3 and has N-glycoside-binding sugar  
 PT chain in its Fc domain.  
 XX Claim 8; SEQ ID NO 15; 124pp; Japanese.  
 PS The invention describes an antibody composition (I), comprising a  
 CC genetically modified antibody molecule which specifically binds to  
 CC ganglioside GD3 and has an N-glycoside-binding complex sugar chain in its  
 CC Fc domain, where the N-glycoside-binding complex sugar chain is a sugar  
 CC chain having no fucose attached to N-acetylglucosamine at the reducing  
 CC end of the sugar chain. Also described are: a transformant (II) capable  
 CC of producing (I), obtained by introducing DNA that encodes the antibody  
 CC molecule which specifically binds with ganglioside GD3, to a host cell;  
 CC producing (I), involving cultivating (I) in a culture medium, such that  
 CC C1 (sic) is produced and accumulated in the culture, extracting and  
 CC purifying C1 from the culture medium; a pharmaceutical (III) containing  
 CC C1 as an active ingredient; and a therapeutic agent (A1) for ganglioside  
 CC GD3 associated disease, comprising C1 as an active ingredient. (I) is  
 CC useful for treating GD3 associated diseases, which involves administering  
 CC (I), where the GD3 associated diseases is cancer. (A1) is also useful for  
 CC treating GD3 associated disease. (II) is useful for producing (I). (I) is  
 CC useful for manufacturing a therapeutic agent for GD3 associated disease.  
 CC This sequence represents a ganglioside GD3 binding antibody associated  
 CC peptide.

 PS  
 XX Example 2 describes the construction of the vector pCh1641HA1 for  
 CC chimeric human antibody H chain expression. mRNA from mouse anti-GD3

CC monoclonal Ab KM641-producing cells was isolated and KM641 H and L chain  
 CC cDNAs isolated. The base sequences of the Ig variable regions in KM641 H  
 CC chain cDNA (pKM641HA3) and KM641 L chain cDNA (pKM641LA2) are given in  
 CC AAQ5438-39. A KM641-derived chimeric human Ab H chain expression vector  
 CC was constructed by joining the H chain variable region gene from  
 CC pKM641HA3 to a vector for chimeric human Ab H chain expression using the  
 CC synthetic DNAs given in AAQ63439 and AAQ63440

XX Novel c-Met protein tyrosine kinase antibody or its antigen-binding

PT portion specifically binding to c-Met, useful for manufacture of

PT medicament for treating cancer or tumor and for treatment of ophthalmic

PT diseases such as glaucoma.

XX Claim 1; SEQ ID NO 23; 303pp; English.

XX The invention relates to a novel c-Met protein tyrosine kinase antibody

CC or its antigen binding portion that specifically binds to c-Met. The c-

CC Met antibody comprises any one of 1-60 fully defined sequence of 238,

CC 244, 240, 250, 251, 242, 245, 247, 246, 253, 249, 243, 241, etc., amino

CC acids as given in the specification, or its fragment. The invention

CC further comprises: a pharmaceutical composition comprising the c-Met

CC protein tyrosine kinase antibody and a carrier; an isolated cell that

CC produces the c-Met protein tyrosine kinase antibody; and an isolated

CC nucleic acid molecule that comprises a nucleic acid sequence that encodes

CC a heavy chain or its antigen-binding portion or light chain or its

CC antigen-binding portion of the c-Met protein tyrosine kinase antibody.

CC The c-Met protein tyrosine kinase antibody has cytostatic,

CC ophthalmological, antiinflammatory, analgesic, vasotropic, antipsoriatic,

CC and osteopathic activities. The c-Met protein tyrosine kinase antibody is

CC useful for the manufacture of medicament for the treatment of cancer or

CC tumour. The c-Met protein tyrosine kinase antibody is useful for

CC diagnosing the presence or ligation of c-Met expressing tissue. The c-Met

CC protein tyrosine kinase antibody is useful for detecting c-Met in a

CC biological sample in vitro or in vivo. The c-Met protein tyrosine kinase

CC antibody is also useful in the treatment or prevention of ophthalmic

CC diseases such as glaucoma, retinitis, retnopathies (e.g., diabetic

CC retinopathy), uveitis, ocular photophobia, macular degeneration and pain

CC associated with acute injury to the eye. The pharmaceutical composition

CC is useful for the treatment of hyperproliferative disorders such as

CC restenosis after angioplasty, and psoriasis, and for the treatment of

CC animals that lack sufficient HGF, e.g. osteoporosis and cancer. This

CC sequence represents the protein of a phage display generated human c-Met

CC antibody of the invention.

 DR New antibody that binds specifically to a stalk of CD30 of a cell, or to  
 PT an epitope destroyed upon cleavage of soluble CD30 (sCD30) from intact  
 PT CD30, useful for inhibiting the growth of a CD30+ cancer cell.  
 XX Example 1; SEQ ID NO 5; 102pp; English.

CC The present invention describes an isolated antibody that binds  
 CC specifically to a stalk of CD30 of a cell, or to an epitope destroyed  
 CC upon cleavage of soluble CD30 (sCD30) from intact CD30. Also described:  
 CC (1) a composition comprising the antibody conjugated or fused to a  
 CC therapeutic part; (2) a nucleic acid encoding an antibody that binds  
 CC specifically to a stalk of CD30 of a cell, or to an epitope destroyed  
 CC upon cleavage of sCD30 from intact CD30; (3) an expression vector  
 CC comprising the nucleic acid operably linked to a promoter; (4) inhibiting  
 CC growth of a CD30+ cancer cell; (5) detecting the presence of a CD30+ cell  
 CC in a biological sample; (6) a host cell expressing the isolated nucleic  
 CC acid encoding the antibody having variable heavy and variable light  
 CC chains; and (7) a kit for detecting the presence of a CD30+ cancer cell  
 CC in a biological sample comprising a container and an anti-CD30 antibody.  
 CC An anti-CD30 antibody has cytostatic activity, and can be used in gene  
 CC therapy. The anti-CD30 antibody that binds specifically to a stalk of  
 CC CD30 of a cell, or to an epitope destroyed upon cleavage of sCD30 from  
 CC intact CD30 is useful for the manufacture of a medicament for inhibiting  
 CC the growth of a CD30+ cancer cell. The present sequence is used in the  
 CC exemplification of the present invention.

CC New antibody that competitively inhibits binding of TMEFF219 to TMEFF2,  
 CC useful for treating prostate cancer, e.g. primary, metastatic, locally  
 CC advanced, or androgen independent prostate cancer.  
 XX Example 1; SEQ ID NO 6; 51pp; English.  
 PS The present invention describes an antibody (I) that competitively  
 CC inhibits binding of TMEFF2#19 to TMEFF2. Also described: (1) a  
 CC pharmaceutical composition comprising the antibody and a carrier; (2)  
 CC detecting a prostate cancer cell in a biological sample from a patient by  
 CC contacting the biological sample with the antibody; (3) inhibiting the cell  
 CC proliferation of a prostate cancer-associated cell by contacting the cell  
 CC with the antibody; and (4) treating prostate cancer with an antibody to  
 CC TMEFF2. (I) has cytostatic activity and can be used in vaccines. The  
 CC antibody, composition and method are useful for treating prostate cancer,  
 CC e.g. primary prostate cancer, metastatic prostate cancer, locally  
 CC advanced prostate cancer, androgen independent prostate cancer, prostate  
 CC cancer that has been treated with neoadjuvant therapy, or prostate cancer  
 CC that is refractory to treatment with neoadjuvant therapy. The present  
 CC sequence is used in the exemplification of the present invention.

 XX PS Claim 5; SEQ ID NO 55; 69pp; Japanese.  
 XX CC This invention describes a novel bispecific antibody which can act as a  
 CC cofactor to enhance an enzyme reaction and can recognize the enzyme and  
 CC the enzyme substrate. The antibody specifically binds to blood  
 CC coagulation factor VIII. The invention also describes a composition  
 CC comprising the antibody and a carrier, a kit useful in preventing and/or  
 CC treating bleeding associated with a disorder or from a disease caused by  
 CC bleeding. The composition includes blood coagulation factor VIII. The  
 CC antibody of the invention can be a blood-coagulation fibrinolysis related  
 CC factor including blood-coagulation factor VIII, blood coagulation factor  
 CC X, or blood-coagulation factor IX. The antibody comprises a complementary  
 CC determining region (CDR) of anti-blood-coagulation factor IX/IXa factor  
 CC antibody. The novel antibody or composition is useful for preventing  
 CC and/or treating a disease accompanying bleeding, or the disease resulting  
 CC from bleeding, where the disease accompanying bleeding or the disease  
 CC resulting from bleeding develops and/or progresses by an active reduction  
 CC or deletion of the blood coagulation factor VIII. The disease the  
 CC develops and/or progresses by an active reduction or deletion of the  
 CC blood coagulation factor VIII and/or activation blood coagulation factor  
 CC VIII, is hemophilia A or von Willebrand disease, where the hemophilia is  
 CC an acquired hemophilia A. This sequence represents a fragment of the  
 CC antibody described in the method of the invention. Note: The sequence  
 CC data for this patent did not form part of the printed specification, but  
 CC was obtained in electronic format directly from WIPO at  
 CC ftp.wipo.int/pub/published\_pt\_sequences.

XX DR
XX Novel bispecific antibody substituting for functional protein and having
PT ligand functional alternative activity to receptor containing
PT heteromolecule, useful for preventing/treating viral disease,
PT immunological disease or bleeding.
XX
XX Claim 28; SEQ ID NO 81; 151pp; Japanese.
XX
XX The invention relates to a bispecific antibody (I) substituting for: a
CC functional protein and having ligand functional alternative activity with
CC respect to receptor containing heteromolecule; or a functional cofactor
CC which enhances an enzyme reaction and recognizes both substrates of
CC enzyme. Also claimed are a composition (II) containing (I). (I) and (II)
CC are useful for preventing and/or treating viral disease, neoplasm, or
CC immunological disease, or bleeding or disease resulting from bleeding.
CC The viral disease is a hepatitis C virus or hepatitis B virus infection
CC such as an acute or chronic liver cirrhosis or hepatic carcinoma. The
CC neoplasms are chronic myeloid leukemia, malignant melanoma, multiple
CC myeloma, renal carcinoma, glioblastoma, medulloblastoma, astrocytoma,
CC hairy cell leukemia, AIDS-related Kaposi's sarcoma, skin T cell lymphoma
CC or non-Hodgkin's lymphoma. The immunological disease is multiple
CC sclerosis. The bleeding disease is the disease resulting from the active
CC reduction or a defect of blood coagulation factor VIII such as hemophilia
CC or von Willebrand disease. (II) is useful for manufacturing (I). (I) has
CC high stability and low antigenicity in blood. The present sequence
CC represents a mouse anti-s AR antibody CDR.

 XX Antibodies against B Lymphocyte Stimulating polypeptides, useful for the

PT diagnosis and treatment of cancers and immune disorders.

XX Claim 1; Page 2831-2832; 3148pp; English.

XX This invention describes novel antibodies that immunospecifically bind to  
 CC B Lymphocyte Stimulator (Blys) polypeptides. Blys is a member of the  
 CC tumour necrosis factor (TNF) super family and induces B cell  
 CC proliferation and differentiation. The antibodies of the invention have  
 CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory,  
 CC antirheumatic and antiAIDS activity and can be used in vaccines to  
 CC inhibit the expression and activity of Blys. The antibodies bind to Blys  
 CC and so may be used to detect and quantitate the presence of Blys in  
 CC biological samples and may be used in this way to diagnose disease  
 CC associated with aberrant expression of Blys. They may also be  
 CC administered to treat diseases associated with aberrant Blys expression  
 CC and activity such as cancer, immune, and autoimmune disorders and  
 CC diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis,  
 CC immunodeficiency (e.g. common variable immunodeficiency (CVID) and  
 CC acquired immunodeficiency syndrome (AIDS)). ABP4390-ABP4728 represent  
 CC the antibodies and fragments of the antibodies described in the method of  
 CC the invention

XX WPI; 2003-505530/47.

XX Novel antibody that immunospecifically binds to a B lymphocyte stimulator

PT (Blys), useful for detecting and treating diseases or disorders e.g.

PT rheumatoid arthritis, asthma and leukemia.

XX Example 1; SEQ ID NO 1906; 394pp; English.

XX This invention relates to novel antibodies that immunospecifically bind

CC to B lymphocyte stimulator (Blys). The Blys gene has been mapped to

CC chromosome 13q34 and encodes a protein that is a member of the tumour  
 CC necrosis factor superfamily and induces both in vivo and in vitro B cell  
 CC proliferation and differentiation. Specifically, it refers to single  
 CC chain antibody molecules (scfvs) derived, preferably, from the variable  
 CC heavy CDR3 region that immunospecifically bind to a polypeptide, or  
 CC fragment thereof, of either human, murine, rat or monkey BlyS. The  
 CC present invention refers to the use of such antibodies in various methods  
 CC for the detection, diagnosis and prognosis of diseases related to the  
 CC aberrant expression or inappropriate function of BlyS or its receptor. As  
 CC such, these compositions are useful for identifying immune disorders  
 CC including myasthenia gravis and multiple sclerosis, inflammatory  
 CC disorders e.g. asthma and rheumatoid arthritis, infectious diseases such  
 CC as AIDS and proliferative disorders including leukaemia, carcinoma and  
 CC lymphoma. Accordingly, they can be described as exhibiting various  
 CC activities such as antirheumatic, antiarthritic, neuroprotective,  
 CC antiinflammatory, antiasthmatic, antiallergic and cytostatic. This  
 CC polypeptide sequence is a single chain antibody that binds BlyS of the  
 CC invention. NOTE: The sequence data for this patent did not form part of  
 CC the printed specification, but was obtained in electronic format  
 CC directly from WIPO at ftp.wipo.int/pub/published pct\_sequences.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX comprises variable region of mouse monoclonal antibody, reactive with
XX ganglioside and human antibody constant region.
XX
XX Claim 14; Page 27-28; 65pp; English.
XX
XX The present sequence is a murine immunoglobulin heavy chain variable
XX region from plasmid KM-641. The coding sequence was used in the creation
XX of an expression vector, along with the sequence for a human antibody, to
XX produce humanised chimaeric antibodies, which can be used to treat
XX cancer. Humanised chimaeric antibodies are more effective than mouse
XX antibodies as they do not provoke a reaction in the human and side
XX effects, such as the formation of anti-mouse immunoglobulin antibody and
XX the rapid half-life of the immunoglobulins, do not occur

PT Drugs containing genetically-modified antibody against ganglioside GD3,  
 PT its fragment, immunocompetent cell activators or/and antitumor agents in  
 PT combination, applicable in treating malignant tumor like melanoma.  
 XX  
 PS Example 3; Page 97; 121pp; Japanese.  
 XX  
 XX The invention describes drugs contain a genetically-modified antibody  
 CC against ganglioside GD3 or its fragment and at least 1 of a substance  
 CC capable of activating immunocompetent cells and a substance having an  
 CC antitumor activity in combination. The drugs can be used to treat tumour  
 CC like melanoma and can provide a treatment with enhanced therapeutic  
 CC effect and little side-reactions, particularly to relieve problems of  
 CC side-effects during the conventional single administration. This sequence  
 CC represents a protein associated with the anti- ganglioside GD3 antibody

 PS Claim 6; SEQ ID NO 102; 722pp; English.  
 XX  
 CC The invention relates to Lactobacillus acidophilus cell wall, cell  
 CC surface and secreted protein nucleic acid molecules comprising any of the  
 CC 154 nucleotide sequences, fully defined in the specification, and the  
 CC polypeptide sequences encoded by them. Also disclosed are a vector  
 CC comprising the nucleic acid molecule, a host cell that contains the  
 CC vector, an isolated polypeptide as encoded by the nucleic acid molecule,  
 CC an antibody that selectively binds to the polypeptide, and a  
 CC Lactobacillus acidophilus bacterial strain with a modified ability for  
 CC modulating the immune system of a host, as compared to a wild-type  
 CC Lactobacillus acidophilus, where the modified ability is due to  
 CC expression of at least one of the polypeptides cited above. The nucleic  
 CC acid molecules and polypeptides are useful for treating gastrointestinal  
 CC disorders, e.g. inflammatory bowel disease, Crohn's disease, ulcerative  
 CC colitis, irritable bowel syndrome, diarrhoea, antibiotic-associated  
 CC diarrhoea, constipation, and small bowel bacterial overgrowth. This  
 CC sequence represents a L. acidophilus polypeptide sequence of the  
 CC invention.

 XX New recombinant DNA constructs useful in the field of biochemistry and  
 PT genetics, and in particular for producing transgenic plants with improved  
 PT biological characteristics.  
 PT  
 PS Claim 2; SEQ ID NO 10028; 14pp; English.  
 XX  
 CC The invention relates a recombinant DNA construct comprising a  
 CC polynucleotide having any of 5544 nucleotide sequences (CDNAs SEQ ID NO:  
 CC 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences  
 CC (SEQ ID NO: 5545-11088). The CDNAs and proteins are from corn, soybean,  
 CC Arabidopsis, wheat and rape but the specification does not indicate which  
 CC sequences is derived from which organism. Also included is a method of  
 CC producing a plant having an improved property, comprising transforming a  
 CC plant with a recombinant DNA construct comprising a promoter region  
 CC functional in a plant cell operably joined to a polynucleotide encoding a  
 CC polypeptide associated with the property, and growing the transformed  
 CC plant. The property is selected from improving plant cold tolerance, for  
 CC manipulating growth rate in plant cells by modification of the cell cycle  
 CC pathway, for improving plant drought tolerance, for providing increased  
 CC resistance to plant disease, for galactomannan production, for production  
 CC of plant growth regulators, for improving plant heat tolerance, for  
 CC improving plant tolerance to herbicides, for increasing the rate of  
 CC homologous recombination in plants, for lignin production, for improving  
 CC plant tolerance to extreme osmotic conditions, for improving plant  
 CC tolerance to pathogens or pests, for yield improvement by modification of  
 CC photosynthesis, for modifying seed oil yield and/or content, for  
 CC modifying seed protein yield and/or content, for yield improvement by  
 CC modification of carbohydrate, nitrogen or phosphorus use and/or uptake  
 CC and for yield improvement by providing improved plant growth and  
 CC development under at least one stress condition. The polynucleotide may  
 CC also encode a plant transcription factor. The methods and compositions of  
 CC the present invention are useful in the field of biochemistry and  
 CC genetics, in particular for producing transgenic plants with improved  
 CC biological characteristics such as increased yield, improved nitrogen  
 CC flow, increasing plant tolerance to cold or heat, improving plant  
 CC tolerance to extreme osmotic and drought conditions, and improving plant  
 CC tolerance to plant pests or pathogens. They can also be used in physical  
 CC arrays of molecules, plant breeding markers, computer-based storage and  
 CC analysis systems. The present sequence is one of the 5544 plant protein  
 CC sequences of the invention. Note: The sequence data for this patent did  
 CC not form part of the printed specification, but was obtained in  
 CC electronic format directly from USPTO at  
 CC seqdata.uspto.gov/sequence.html?DocID=20040216190.

XX New gene-coding polynucleotides of the chromosome of Chromobacterium  
PT violaceum, useful for therapeutic, diagnostic or pharmacological  
PT applications, in control processes for environmental parameters or in  
PT enzyme synthesis.  
XX Claim 4; SEQ ID NO 19; 31pp; English.  
XX The present sequence is that of the protein encoded by the CV44287 gene  
CC of Chromobacterium violaceum strain ATCC 12472 (NCIB 9131, NCTC 9757, JCM  
CC 1249, DSM 30191, IAM 12470, LMG 1267). The invention relates to 29  
CC polynucleotides that have been identified by sequencing the genome of  
CC this strain, to the polypeptides ADQ26328-ADQ26356 encoded by these  
CC polynucleotides, and to the uses of the polynucleotides and polypeptides  
CC for therapeutic, diagnostic, medicinal, pharmacological and  
CC pharmacognostic applications, in control processes for environmental  
CC parameters, and in enzyme synthetic processes. The CV44287 gene is  
CC involved in haemolytic activity. The gene and the encoded polypeptide can  
CC be used in the production of haemolysins for pharmaceutical use as  
CC anticoagulants.

XX New recombinant DNA construct, useful for improving plant tolerance to  
PT cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or  
PT pests, for conferring increased resistance to plant disease, or for  
PT improving yield.  
XX Claim 1; SEQ ID NO 46787; 15pp; English.  
XX The invention describes a recombinant DNA construct comprising a  
CC polynucleotide consisting of a sequence encoding an amino acid sequence  
CC available in electronic form from the US Patent Office at  
CC ftp.segdata.uspto.gov/sequence.html?docID:2004034888. The polynucleotide  
CC of the invention are also useful in physical arrays of molecules and as  
CC plant breeding markers. The recombinant DNA construct is useful for  
CC improving plant tolerance to cold, heat, drought, herbicides, extreme  
CC osmotic conditions, pathogens or pests, for manipulating growth rate in  
CC plant cells by modification of the cell cycle pathway, for conferring  
CC increased resistance to plant disease, for producing galactomannan,  
CC lignin or plant growth regulators, for increasing the rate of homologous  
CC recombination in plants, for improving yield by modification of  
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake  
CC or by providing improved plant growth and development under at least one  
CC stress condition or for modifying seed oil or protein yield and/or  
CC content. This is the amino acid sequence of a plant full length insert  
CC polypeptide that can be used in the recombinant DNA construct of the  
CC invention.

XX PT New stress-responsive nucleic acid, useful for altering the  
XX PT responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold  
XX PT stress, salt stress or osmotic stress.

XX PS Claim 1; SEQ ID NO 7137; 89pp; English.

XX CC The invention relates to novel abiotic stress responsive polynucleotides  
XX CC and polypeptides. Also disclosed are vectors, expression cassettes, host  
XX CC cells, and plants containing such polynucleotides. Also disclosed are  
XX CC methods for using the polynucleotides and polypeptides to alter the  
XX CC responsiveness of a plant to abiotic stress. The invention is useful in  
XX CC agriculture. The nucleic acid is useful for determining whether a test  
XX CC plant has been exposed to an abiotic stress condition. It is also useful  
XX CC for selecting an agent that alters abiotic stress regulated  
XX CC polynucleotide expression in a plant cell, and to identify a homolog or  
XX CC ortholog to an abiotic stress responsive polynucleotide. The nucleic acid  
XX CC molecule and the polypeptide encoded by it are useful in altering the  
XX CC responsiveness of a plant to an abiotic stress, such as cold stress, salt  
XX CC stress, osmotic stress or any of their combinations. The present sequence  
XX CC is used in the exemplification of the invention

XX New isolated nucleic acid derived from Enterococcus faecium encoding an
PT Enterococcus faecium polypeptide useful for detection, prevention and
PT treatment of a pathological condition resulting from a bacterial
PT infection.
XX Example 1; SEQ ID NO 6082; 243pp; English.
XX The invention relates to an isolated nucleic acid derived from
CC Enterococcus faecium encoding an Enterococcus faecium polypeptide having
CC one of 10 fully defined sequences given in the (or comprising 40
CC sequential nucleotides chosen from any of the nucleic acids, its
CC complement or sequences hybridising to it). Also included are a
CC recombinant vector comprising the nucleic acid operably linked to
CC transcription regulatory element, a cell comprising the vector and a
CC single-stranded probe comprising the nucleic acid. The nucleic acids are
CC chosen from 3654 disclosed sequences encoding 3654 disclosed proteins.
CC The nucleic acids is useful for diagnosing pathological conditions
CC resulting from E. faecium bacterial infection (e.g. urinary tract
CC infection, bacteraemia, endocarditis, wounds and abdominal-pelvic
CC infection) and for screening drugs such as agonists and antagonists. The
CC nucleic acid is useful for recombinant production of Candida albicans -
CC derived peptides or antisense polypeptides. Pharmaceutical compositions
CC and vaccines containing the nucleic acid are useful for preventing or
CC treating Enterococcus faecium infections. The present sequence represents
CC one if the disclosed E. faecium proteins.

 XX PT and peripheral nervous system diseases and neuropathies, such as  
 XX PT Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic  
 XX PT lateral sclerosis.  
 XX PS Claim 20; SEQ ID NO 447; 300pp; English.  
 XX CC The present invention relates to the isolation of novel human  
 XX CC polynucleotide sequences and their encoding polypeptides. The novel  
 XX CC polypeptides exhibit activities relating to angiogenesis, cytokine, cell  
 XX CC proliferation, cell differentiation, antiinflammatory, and stem cell  
 XX CC growth factor activities. The polypeptides are involved in the  
 XX CC proliferation, differentiation and survival of pluripotent and totipotent  
 XX CC stem cells, and are useful for re-engineering damaged or diseased  
 XX CC tissues, transplantation, manufacture of bio-pharmaceuticals and  
 XX CC development of bio-sensors. The polypeptides can be used to manipulate  
 XX CC stem cells in culture to give rise to neuroepithelial cells that can be  
 XX CC used to augment or replace cells damaged by illness, autoimmune disease,  
 XX CC accidental damage or genetic disorders. The polypeptides induce the  
 XX CC proliferation of neural cells and regeneration of nerve and brain tissue  
 XX CC and are useful for the treatment of central and peripheral nervous system  
 XX CC diseases and neuropathies, such as Alzheimer's, Parkinson's disease,  
 XX CC Huntington's disease, amyotrophic lateral sclerosis (ALS). The  
 XX CC polypeptides are also involved in chemotactic or chemokinetic activity,  
 XX CC regulation of haematopoiesis and are useful for treating myeloid or  
 XX CC lymphoid cell disorders, platelet disorders such as thrombocytopaenia and  
 XX CC for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue  
 XX CC growth, in tissue repair, healing of burns, incisions, ulcers, for  
 XX CC treating osteoporosis, osteoarthritis, bone degenerative disorders, and  
 XX CC periodontal disease. The polypeptides are also useful for gut protection  
 XX CC or regeneration and treatment of lung or liver fibrosis, reperfusion  
 XX CC injury in various tissues, various immune deficiencies and disorders  
 XX CC including severe combined immunodeficiency (SCID), bacterial or fungal  
 XX CC infections, autoimmune disorders (e.g. multiple sclerosis, rheumatoid  
 XX CC arthritis, diabetes mellitus, myasthenia gravis), allergic reactions and  
 XX CC conditions, such as asthma or other respiratory problems. The  
 XX CC polypeptides are involved in thrombolysis or thrombosis and are useful in  
 XX CC treatment of various coagulation disorders (including hereditary  
 XX CC disorders such as haemophilia) or to enhance coagulation and other  
 XX CC haemostatic events in treating wounds resulting from trauma, surgery or  
 XX CC other causes. The polypeptides exhibit immune stimulating or immune  
 XX CC suppressing activity, and are useful for treating autoimmune diseases or  
 XX CC cancer. They also inhibit the growth, infection or function of infectious  
 XX CC agents such as bacteria, fungi, viruses, effect biorythms or circadian  
 XX CC cycles of rhythms, fertility of male or female subjects, metabolism,  
 XX CC catabolism, and anabolism. ABO00414-ABO00749 represent the novel  
 XX CC polypeptides of the invention. Note: The sequence data for this patent  
 XX CC did not form part of the printed specification, but was obtained in  
 XX CC electronic format directly from WIPO at  
 XX CC ftp.wipo.int/pub/published\_pct\_sequences

 XX PT Method for disrupting targeted gene in genome of organism particularly  
 XX PT thermostable bacterium and with genome chips for analysis, applicable in  
 XX PT studying gene structure and functions.  
 XX PS Claim 9; SEQ ID NO 55; 598pp; Japanese.  
 XX CC This invention relates to a novel method for targeting disruption of an  
 XX CC arbitrary gene in a genome of an organism which comprises providing the  
 XX CC whole sequential data of the genome of such organism, selecting at least  
 XX CC 1 arbitrary region in the sequence, providing a vector that contains a  
 XX CC sequence homologous with the selected region and a marker gene,  
 XX CC transformation, and homologous recombination. The genome is preferably  
 XX CC the genome of a hyperthermostable archaeobacterium, particularly  
 XX CC Thermococcus kodakaraensis KOD1. The method is for targeting the  
 XX CC disruption of a gene in the genome of an organism, which is applicable in  
 XX CC studying gene structure and functions as well as enzyme activities of  
 XX CC encoded proteins and useful in medicine, forensic science, food or drug  
 XX CC inspection, molecular biology and immunology. With this method, the  
 XX CC disruption of a gene at an arbitrary position in a genome can be achieved  
 XX CC efficiently and reliably. The present sequence is that of a protein  
 XX CC encoded by the genome of Thermococcus kodakaraensis which was derived  
 XX CC using the method of the invention. Note: The sequence data for this  
 XX CC patent did not form part of the printed specification, but was obtained

 XX Claim 11; Page 496-498; 553pp; English.  
 XX  
 XX AAD08283-AAD08355 represent cDNAs corresponding to 23 human secreted  
 CC protein genes, and AAE03818-AAE03970 represent the proteins they encode.  
 CC AAE03871-AAE03896 represent human secreted protein fragments or variants.  
 CC The secreted proteins and their genes are useful for preventing, treating  
 CC or ameliorating medical conditions, e.g., by protein or gene therapy.  
 CC Pathological conditions can be diagnosed by determining the amount of the  
 CC new protein in a sample or by determining the presence of mutations in  
 CC the new genes. Specific uses are described for each of the 23 genes,  
 CC based on the tissues in which they are most highly expressed, and include  
 CC developing products for the diagnosis or treatment of proliferative  
 CC disorders, cancer, tumours, foetal and developmental abnormalities,  
 CC haematopoietic disorders, diseases of the immune system, AIDS, autoimmune  
 CC diseases (e.g., rheumatoid arthritis), inflammation, allergies,  
 CC neurological disorders (e.g., Alzheimer's disease, Parkinson's disease),  
 CC cognitive disorders, schizophrenia, asthma, skin disorders (e.g.,  
 CC psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders,  
 CC anogenital disorders, kidney disorders, gastrointestinal disorders,  
 CC pregnancy-related disorders, endocrine disorders, and infections. The  
 CC proteins can also be used to aid wound healing and epithelial cell  
 CC proliferation, to prevent skin aging due to sunburn, to maintain organs  
 CC before transplantation, for supporting cell culture of primary tissues,  
 CC to regenerate tissues, to identify their cognate ligands or binding  
 CC partners, and in chemotaxis, and can be used as a food additive or  
 CC preservative to modify storage properties. Antibodies specific for a  
 CC protein of the invention can be used in alleviating symptoms associated  
 CC with the disorders mentioned above, and in diagnostic immunoassays e.g.,

CC radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The  
 CC present sequence represents a human secreted protein of the invention

 CC therapeutic protein X and human albumin (HA, also known as human serum  
 CC albumin, HSA). The proteins are useful for treating a disease or disorder  
 CC that may be modulated by therapeutic protein X. The albumin extends the  
 CC shelf-life of protein X, and may increase its biological in vitro/in vivo  
 CC activity. The protein is useful for treating and diagnosing disorders  
 CC such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's  
 CC disease, ulcerative colitis), immune disorders (e.g. acquired  
 CC immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes),  
 CC haematopoietic disorders, neural disorders (e.g. Alzheimer's,  
 CC Parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis,  
 CC schizophrenia), and connective disorders (e.g. osteoporosis, arthritis).

 XX

The invention relates to a novel albumin fusion protein. The invention  
 CC further relates to: a composition comprising the albumin fusion protein  
 CC and a pharmaceutical carrier; a kit comprising the composition of the  
 CC albumin fusion protein formula; a method of treating a disease or  
 CC disorder in a patient comprising the step of administering the albumin  
 CC fusion protein; a method of treating a patient with a disease or disorder  
 CC that is modulated by Therapeutic protein: X, or its fragment or variant;  
 CC a method of extending the shelf life of Therapeutic protein: X, or its  
 CC fragment or variant; a nucleic acid molecule comprising a polynucleotide  
 CC sequence encoding the albumin fusion protein; a vector comprising the  
 CC nucleic acid molecule of the albumin fusion protein; and a host cell  
 CC comprising the nucleic acid molecule of the albumin fusion protein. The  
 CC albumin fusion protein and its compositions have the following  
 CC activities: cytostatic, antianaemic, antiarthritic, antiasthmatic, anti-  
 CC HIV, immunosuppressive, antiinflammatory, antipsoriatic, antibacterial,  
 CC osteopathic, dermatological, antigout, immunomodulator, antiarrhythmic,  
 CC cardiac, nootropic, antilipaeamic, nephrotropic, uropathic,  
 CC neuroprotective, antiparkinsonian, tranquilizer, antidiabetic, anabolic,  
 CC hypertensive, and vulnary. The albumin fusion protein nucleic acid may  
 CC be used in gene therapy to treat disorders. The albumin fusion protein is  
 CC useful for diagnosing, treating, preventing or ameliorating diseases or

disorders comprising indication: Y. The diseases or disorders include:  
 CC cancer (e.g. leukaemia, colon, bone, breast, liver or lung cancer),  
 CC immune or haematopoietic diseases (e.g. anaemia, Hodgkin's disease, acute  
 CC lymphocytic anaemia, multiple myeloma, arthritis, asthma, AIDS,  
 CC autoimmune disease, inflammatory bowel disease, psoriasis or Lyme  
 CC disease), reproductive system disorders (e.g. prostatitis, inguinal  
 CC hernia, varicocele, penile carcinoma, ovarian adenocarcinoma or Sertoli-  
 CC leydig tumours), musculoskeletal diseases (e.g. giant cell tumours,  
 CC Paget's disease, systemic lupus erythematosus, gout, muscular dystrophy  
 CC or cachexia), cardiovascular disease (e.g. rhabdomyomas, heart disease,  
 CC arrhythmia, cardiac arrest, heat valve disease, hypernatraemia or  
 CC hyponatraemia), mixed foetal diseases (e.g. foetal alcohol syndrome,  
 CC Down's syndrome, Patau syndrome, Turner's syndrome, Apert syndrome or Tay  
 CC -Sachs disease), excretory diseases (e.g. urinary incontinence, urinary  
 CC tract infections or renal disorders), neural or sensory disease (e.g.  
 CC Alzheimer's disease, Parkinson's disease, cerebral malaria, meningitis,  
 CC cerebellar ataxia, attention deficit disorder, autism or obsessive  
 CC compulsive disorder), respiratory disease (e.g. emphysema, lung cancer or  
 CC occupational lung disease), endocrine diseases (e.g. diabetes, Addison's  
 CC disease or glomerulonephritis), digestive diseases (e.g. portal  
 CC or connective tissue or epithelial diseases (e.g. Crohn's disease,  
 CC scleroderma, wound healing or epidermolysis bullosa). This sequence  
 CC represents a therapeutic protein X relating to the albumin fusion protein  
 CC of the invention. The sequence listing data for this specification was  
 CC downloaded from the USPTO website.

 PT aplastic anemia or cancer for promoting wound healing.

XX PS Claim 20; SEQ ID NO 707; 718pp; English.

XX CC The invention relates to a novel isolated polynucleotide and the encoded

XX CC polypeptide. The molecules of the invention demonstrate antiinflammatory,

XX CC neuroprotective, antianaemic, cytostatic and vulnerary activities and may

XX CC be useful in preparing a composition for diagnosing or treating

XX CC inflammatory, haematopoietic, immune, neurodegenerative or stem cell

XX CC disorders, such as aplastic anaemia or cancer, as well as for promoting

XX CC wound healing. The molecules may also be utilised during gene therapy

XX CC procedures. The current sequence is that of a human therapeutic protein

XX CC of the invention. The current sequence is not shown explicitly within the

XX CC specification but can be accessed from the WIPO web-site.

XX PT Staphylococcus epidermidis, useful for diagnosing, preventing and/or

XX PT treating an S. epidermidis bacterial infection.

XX PS Claim 17; SEQ ID NO 4330; 741pp; English.

XX CC The invention describes an isolated nucleic acid comprising a nucleotide

XX CC sequence with any of 3772 fully defined nucleotide sequences (SEQ ID NO:

XX CC 1-3772) and encoding an Staphylococcus epidermidis polypeptide with any

XX CC of 3772 fully defined amino acid sequences (SEQ ID NO: 3772-7544) as

XX CC given in the specification. Also described are: a recombinant expression

XX CC vector; a cell comprising a recombinant expression vector of (1);

XX CC producing an S. epidermidis polypeptide; an isolated nucleic acid

XX CC comprising a nucleotide sequence of at least 8 nucleotides in length; a

XX CC vaccine composition for prevention or treatment of an S. epidermidis

XX CC infection, comprising a nucleic acid cited above and a carrier; treating

XX CC a subject for S. epidermidis infection; a recombinant or substantially

XX CC pure preparation of an S. epidermidis polypeptide or its fragment; a

XX CC vaccine composition for prevention or treatment of an S. epidermidis

XX CC infection; detecting the presence of a Staphylococcus nucleic acid in a

XX CC sample; a computer readable medium having recorded in it the nucleotide

XX CC sequences with SEQ ID NO: 1-3772 or its fragments; a computer based

XX CC system for identifying fragments of the Staphylococcus genome of

XX CC commercial importance; a computer based system for identifying fragments

XX CC of the Staphylococcus plasmids of commercial importance; identifying

XX CC commercially important nucleic acid fragments of the Staphylococcus

XX CC genome and/or plasmids; and identifying an expression modulating fragment

XX CC of the Staphylococcus genome and/or plasmids. The methods and

XX CC compositions of the present invention are useful for the diagnosis,

CC prevention and/or treatment of an Staphylococcal epidermidis bacterial  
CC infection. This is the amino acid sequence of a S. epidermis protein of  
CC the invention.

XX Nucleic acids encoding secretory proteins/membrane proteins, useful in  
PT gene therapy or as candidate target molecules in drug development.

XX Claim 1; SEQ ID NO 330; 609pp + Sequence Listing; English.

XX This invention relates to nucleic acid sequences AAF93744 - AAF93916  
CC which encode human secretory or membrane proteins represented by AAB88317  
CC - AAB88419. Included in the invention are primers AAF93917 - AAF94295 and  
CC AAF62232 - AAF62235 which are used to isolate the cDNA sequences of the  
CC invention. The invention also includes methods for the production of  
CC antibodies directed against the proteins, and cDNA sequences, which can  
CC be used in vaccines. The polynucleotide sequences can be used in gene  
CC therapy. The polynucleotide sequences and the proteins they encode may be  
CC used in the prevention, treatment and diagnosis of diseases associated  
CC with inappropriate secretory protein/membrane protein expression. The  
CC nucleic acids and complementary sequences may also be used as DNA probes  
CC in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect  
CC and quantitate the presence of similar nucleic acid sequences in samples.  
CC They may also be used to study the expression and function of secretory  
CC proteins/membrane polypeptides and their role in metabolism. The  
CC polypeptides may be used as antigens in the production of antibodies  
CC against them and in assays to identify modulators (agonists and  
CC antagonists) of expression and activity. The antibodies and antagonists  
CC may also be used as therapeutic agents to down regulate expression and  
CC activity. The antibodies may also be used as diagnostic agents for  
CC detecting the presence of the polypeptides in samples (e.g. by enzyme

CC linked immunosorbant assay (ELISA). Examples of diseases which may be  
CC treated include rheumatoid arthritis and diabetes

 CC The invention relates to a protein (ABP25413-ABP30895) from group B  
 CC streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS  
 CC (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in  
 CC the specification. The proteins have antibacterial and antiinflammatory  
 CC activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and  
 CC antibodies that bind (I) are used in the manufacture of medicaments for  
 CC the treatment or prevention of infection or disease caused by  
 CC Streptococcus bacteria, particularly S. agalactiae and S. pyogenes.  
 CC Nucleic acids encoding (I) are used to detect Streptococcus in a  
 CC biological sample. (I) is used to determine whether a compound binds to  
 CC Streptococcus bacteria, particularly S. agalactiae and S. pyogenes.  
 CC (I). A composition comprising (I) or a nucleic acid encoding (I), may be  
 CC used as a vaccine or diagnostic composition. The disease caused by  
 CC Streptococcus that is prevented or treated may be meningitis. Nucleic  
 CC acid encoding (I) may be used to recombinantly produce (I) and may be  
 CC used in gene therapy. Antibodies to (I) are used for affinity  
 CC chromatography, immunoassays, and distinguishing/identifying  
 CC Streptococcus proteins

XX New Streptococcus protein for the treatment or prevention of infection or  
 PT disease caused by Streptococcus bacteria, such as meningitis, and for  
 PT detecting a compound that binds to the protein.  
 XX  
 PS Claim 1; Page 3329; 4525pp; English.  
 XX  
 CC The invention relates to a protein (ABP25413-ABP30895) from group B  
 CC streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS  
 CC (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in  
 CC the specification. The proteins have antibacterial and antiinflammatory  
 CC activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and  
 CC antibodies that bind (I) are used in the manufacture of medicaments for  
 CC the treatment or prevention of infection or disease caused by  
 CC Streptococcus bacteria, particularly S. agalactiae and S. pyogenes.  
 CC Nucleic acids encoding (I) are used to detect Streptococcus in a  
 CC biological sample. (I) is used to determine whether a compound binds to  
 CC Streptococcus bacteria, particularly S. agalactiae and S. pyogenes.  
 CC (I). A composition comprising (I) or a nucleic acid encoding (I), may be  
 CC used as a vaccine or diagnostic composition. The disease caused by  
 CC Streptococcus that is prevented or treated may be meningitis. Nucleic  
 CC acid encoding (I) may be used to recombinantly produce (I) and may be  
 CC used in gene therapy. Antibodies to (I) are used for affinity  
 CC chromatography, immunoassays, and distinguishing/identifying  
 CC Streptococcus proteins

 PT Method for disrupting targeted gene in genome of organism particularly  
 PT thermostable bacterium and with genome chips for analysis, applicable in  
 PT studying gene structure and functions.  
 XX  
 PS Claim 9; SEQ ID NO 350; 598pp; Japanese.  
 XX  
 CC This invention relates to a novel method for targeting disruption of an  
 CC arbitrary gene in a genome of an organism which comprises providing the  
 CC whole sequential data of the genome of such organism, selecting at least  
 CC 1 arbitrary region in the sequence, providing a vector that contains a  
 CC sequence homologous with the selected region and a marker gene,  
 CC transformation, and homologous recombination. The genome is preferably  
 CC the genome of a hyperthermostable archaeobacterium, particularly  
 CC Thermococcus kodakaraensis KOD1. The method is for targeting the  
 CC disruption of a gene in the genome of an organism, which is applicable in  
 CC studying gene structure and functions as well as enzyme activities of  
 CC encoded proteins and useful in medicine, forensic science, food or drug  
 CC inspection, molecular biology and immunology. With this method, the  
 CC disruption of a gene at an arbitrary position in a genome can be achieved  
 CC efficiently and reliably. The present sequence is that of a protein

CC encoded by the genome of *Thermococcus kodakaraensis* which was derived  
CC using the method of the invention. Note: The sequence data for this  
CC patent did not form part of the printed specification, but was obtained  
CC in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences

 CC The invention relates to an isolated nucleic acid detection reagent  
 CC capable of detecting 1000 or more genes from Drosophila. The invention is  
 CC useful in developmental biology and in elucidating cell signaling and  
 CC cell-cell interactions in higher eukaryotes for the development of  
 CC insecticides, therapeutics and pharmaceutical drugs. The invention  
 CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA  
 CC sequences (ABL01840-ABL16175) and the encoded proteins (ABBS7737-  
 CC ABB72072). The sequence data for this patent did not form part of the  
 CC printed specification, but was obtained in electronic format directly  
 CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

 XX Claim 12; Page 146-147; 227pp; English.  
 PS  
 XX This invention relates to polynucleotide sequences AAF63732 - AAF63777  
 CC which encode Drosophila gustatory receptor proteins represented by  
 CC sequences AAB75193 - AAB75238. The invention includes methods for  
 CC determining gustatory receptor ligands. Also included is a method for  
 CC modulating the expression of the DNA encoding the receptors. The DNA and  
 CC protein sequences may be used for the identification of compounds, e.g.  
 CC pheromones and other semiochemicals, which may be used for pest  
 CC management. The DNA sequences may also be used for behavioural studies  
 CC involving gustatory systems in various organisms. Also, the DNA sequences  
 CC may also be used to track down gustatory receptor genes in insects that  
 CC damage crops or transmit diseases

 DR Novel nucleic acid encoding insect gustatory or odorant receptor protein  
 PT useful for identifying a compound which specifically binds to the

PT receptor for controlling a pest population in an area.  
 XX Disclosure; Page 203-205; 264pp; English.  
 XX The invention relates to an isolated nucleic acid encoding an insect  
 CC gustatory receptor (Gr) or odorant receptor (Or) protein which comprises  
 CC seven transmembrane domains and a C-terminal domain comprising  
 CC consecutive amino acids. The invention is useful for identifying a  
 CC compound which activates the insect receptor or inhibits the activity of  
 CC the insect receptor. The purified insect receptor protein is embedded in  
 CC a lipid bilayer. The invention is sprayed for combating ingestion of  
 CC crops by pest insects, combating disease-carrying insects in an area and  
 CC controlling a pest population in an area. The invention is useful for  
 CC detecting the presence of insect gustatory or odorant receptor and for  
 CC inhibiting the function of the receptor in humans or animals or in  
 CC biological fluids isolated from them. The invention is also useful for  
 CC identifying or isolating other insect receptors and for combating pest  
 CC nuisances. The present sequence is fruit fly gustatory receptor (Gr)  
 CC protein

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
